## History

The company was established in 1997 in Sharjah City, UAE. The main target at that moment was developing software for specific sectors. During that period the software sector in the UAE was under monopolization with ready-made software applications from foreign companies. It was an incentive to start the product operation and capture the market as a proof of success by a company with local base. We initiated our operations in the field by introducing an application for the educational institutions, particularly schools in the GCC countries. The software which handled the school administration for students, administration, finance, performance etc., was indeed a great advantage for the educational institutions which were han-

-ding huge volumes of data either manually or using office applications. With the approval of ministry of education, it did not take long having vast number of schools opting to have our application, for which the number of the clients became over our expectation. This success prompted us to further develop the system with much more options and facilities like library, clinic, email, sms etc. As of now, we have about 200 schools, and more than 500 clients dealing with various applications from real estate, accounting, administration control, lawyer, insurance & clinic software to name a few and still the demand for our solution continuously grow.

The increase of demand for our software had resulted with the requirement of expanding our manpower, resulting to acquire more expert programmer with vast field of experience to cater the needs of our valued clients. Moreover, the support staff is hired to deal with any programming language to boost customer service and technical engineers are present any time for service satisfaction.

## **The Company Business Fields**

### **1 - The Software**

Dana Al-Sharq Computer Technologies offer unrivalled software development services that exceed expectations. Our software developers have had many years experience developing robust software for a wide range of clients. We'd welcome the opportunity to discuss how we can help your organization become more efficient. By understanding your business processes Al-Dana deliver solutions that save businesses time and man hours.

### **Savings**

There is a widespread expectation that software development costs a great deal of money and as a result companies often under-invest in development for fear of being stung. The reality is they are often missing out on big savings. Well specified, designed and implemented software systems can save many, many man hours - helping teams achieve deadlines or freeing up valuable human resources for other tasks - tasks that require the human input.

## The Projects....

- **School Management System** (Local Network)

We'd like to spend some time discussing your organization and its needs. Why not get in touch for consultation about how Al-Dana can help you achieve more?

## 2 - Domain Registration & Web Hosting

Al-Dana Technologies domain name registration service is very easy and simple. If you need a new domain like .com, .net, .org or any of other TLD, we have the best tools for you to find it. We are offering more than 60 extensions for our clients or if you already have your domain, we go out of our way to make sure you get to keep it. We can even monitor and track domains you don't have registered with us. We help you get and keep more of the domains you want. Whether you need help finding the perfect domain, or if you already know what it is, let Al-Dana Technologies help you secure that domain name for your business.

## Shared Hosting Solution

Shared web hosting is designed for customers who own small size websites who need domain hosting for a couple of domain names. Unlike dedicated servers, when you select a Shared Website Hosting Plan, you are choosing to host your website on a Shared Web Server with other people's websites. Shared website servers are attractive options for non-business websites because there is very little setup and our shared servers are all high quality so you don't have to worry about down time. Our security team maintains a strict monitoring and auditing process for our shared hosting servers. However there is not a 100% solution to keep scammers from accessing some websites. If you catch such a site before we do and contact us, we will remedy the situation as soon as possible.

We sell affordable web hosting solutions so you can get your site up and running. Just because your web hosting account would be on a shared web server, it does not mean that we sell cheap web hosting services. Our web servers and web hosting solutions are all high quality, as is our support staff.

Al-Dana offers the latest and most innovative and affordable website hosting features on the web today. Below are key highlights which make Dana Al-Sharq Computer Technology stand out in the busy website hosting crowd.

## 3 - Website Design & Development

Fresh, affordable, innovative and personalized web site design and development for your business or organization.

Dana Al-Sharq Computer Technologies offering web design and development from a basic brochure site to a corporate database or e-commerce site. We have been in business since 1997, developing web site designs for many businesses Globally.

## Web Design

At Dana Al-sharq Computer Technologies, our team of unprecedented professionals delivers high quality and inventive design. With our unique style and advanced approach, the work turns out to be something of a distinct nature. Every moment in the process of making the website is done with precision. We want to fill the niche in the world of web design so we strive to obtain cutting edge information to achieve that goal. Al-Dana has a background in many languages and technologies such as HTML, CSS, XHTML, DHTML, AJAX, JQUERY in order to provide excellent services that meet the most demanding of projects. Our clients will be left with an extraordinary work of art which leads them to be at the top of their competitors.

## Web Development

Only the best developers can change a masterpiece from a visual artist to a magnum opus. And Dana Al-Sharq Computer Technologies has just that. Our Development Team utilize a wide range of current technologies available, including PHP, ASP, Java, ColdFusion, MS-SQL, MySQL, and XML, to develop powerful and efficient applications. We don't only want our clients to see our fine artistry in their website, the overall exertion in building it is what will be revealed.
